2022 Vehicle Classification Report

The following report is a compilation of short term vehicle classification counts taken throughout the state. The counts in this report meet the following criteria:

- They were conducted within the most recent six year counting cycle
- They are the most recent classification count at that site
- Non-interstate counts include at least 48 hours of weekday traffic
- Interstate counts include at least 24 hours of weekday traffic

This report includes vehicle classification percentages for specific count locations as well as vehicle classification percentages averaged by Functional Class.

Caution must be used when applying functional class averages to any specific site, as a local truck generator may cause large spikes in truck traffic. For example, local streets may be residential in character with low truck volumes, or commercial in character with higher truck volumes.

For all count locations listed in this report, the hourly count data is available through the VTrans on-line Traffic Data Management System.

Refer to the VTrans Traffic Data website for access to the on-line system. [VTrans Traffic Data website.](#)
