

Automatic Traffic Recorder Station History 2011-2020

Vermont Agency of Transportation
Traffic Research Unit
June 2021

Automatic Traffic Recorder Station Location History Report; 2011 - 2020
Vermont Agency of Transportation
Traffic Research Unit

The data in this report represents the calculated Annual Average Daily Traffic (AADT) volume for each location that has been counted during the report period. Short-term counts are adjusted to represent the annual average.

All AADT's represent the combined two-way volume of the road.

Raw hourly count data may be found on the VTrans Traffic Data Management System; a link to which may be found on the VTrans Traffic Research webpage: <http://vtrans.vermont.gov/operations/technical-services/traffic>

Traffic count locations are described in the following terms:

- Location: VTrans automatic traffic recorder count (ATR) Location IDs begin with a letter. The letter indicates the county. Counties with the same first letter are handled alphabetically, for example W = Washington, X = Windham, and Y = Windsor.
Location IDs beginning with a "3" indicate intersection turning movement counts. These are 48-hour video counts that have been processed using video detection and can be used in the same manner as automatic traffic recorder counts.
The database also includes Location IDs with non-standard naming. These need to be reviewed individually to identify the type of count conducted.
- Community: The city or town in which the count is located.
- Route: This is the state route designation.
- Alt Route: This is the town highway number or alternate route name.
- FC: The FHWA functional classification of the route at the count location.
- R/U: U indicates that the count location is within the Federal Aid Urban Area Boundary; R indicates that it is not.
- MM: (Mile Marker) The distance in miles along the road from the town line. Distances are measured from south to north and from west to east. Interstate miles are measured from the state line. These mile markers are approximate and may represent the midpoint of the roadway section covered by the count.
